

Assignment: AI Around Me

1. Face Unlock

Uses **computer vision models (CNNs)** to recognize facial features and match them with stored data.

2. Music Recommendations (like Spotify)

Uses **collaborative filtering + user behavior data** to suggest songs based on your listening habits.

3. Video Suggestions (like YouTube)

Uses **deep learning models** to track watch time, likes, and clicks to recommend videos.

4. Email Spam Filter (like Gmail)

Uses **Naive Bayes / classification models** to detect spam based on keywords and patterns.

5. Navigation (like Google Maps)

Uses **predictive ML models** on traffic data to estimate fastest routes and travel time.

6. Shopping Recommendations (like Amazon)

Uses **recommendation systems** based on past purchases, searches, and similar users.

7. Voice Assistants (like Google Assistant)

Uses **speech recognition + NLP models** to understand voice and generate responses.

8. Camera Filters / Face Effects (like Instagram)

Uses **real-time image processing + ML models** to detect facial landmarks and apply filters.

9. Autocorrect & Predictive Text

Uses **language models (NLP)** trained on large text datasets to predict next words.

10. Fraud Detection (Banking Apps)

Uses **anomaly detection models** to identify unusual transactions compared to your normal behavior.
